TEAM EXPLOITX

SCD CHAMPIONSHIP

PROJECT OBJECTIVE

THE PROBLEM

OUR MEASURABLE OBJECTIVE

- 01 Unify AWS, Azure & GCP IAM plus HR into one canonical permission model
- 02 Surface risk ranked by measured blast radius, with causal history
- 03 Make every finding independently verifiable against an on-chain root

WHO'S AFFECTED

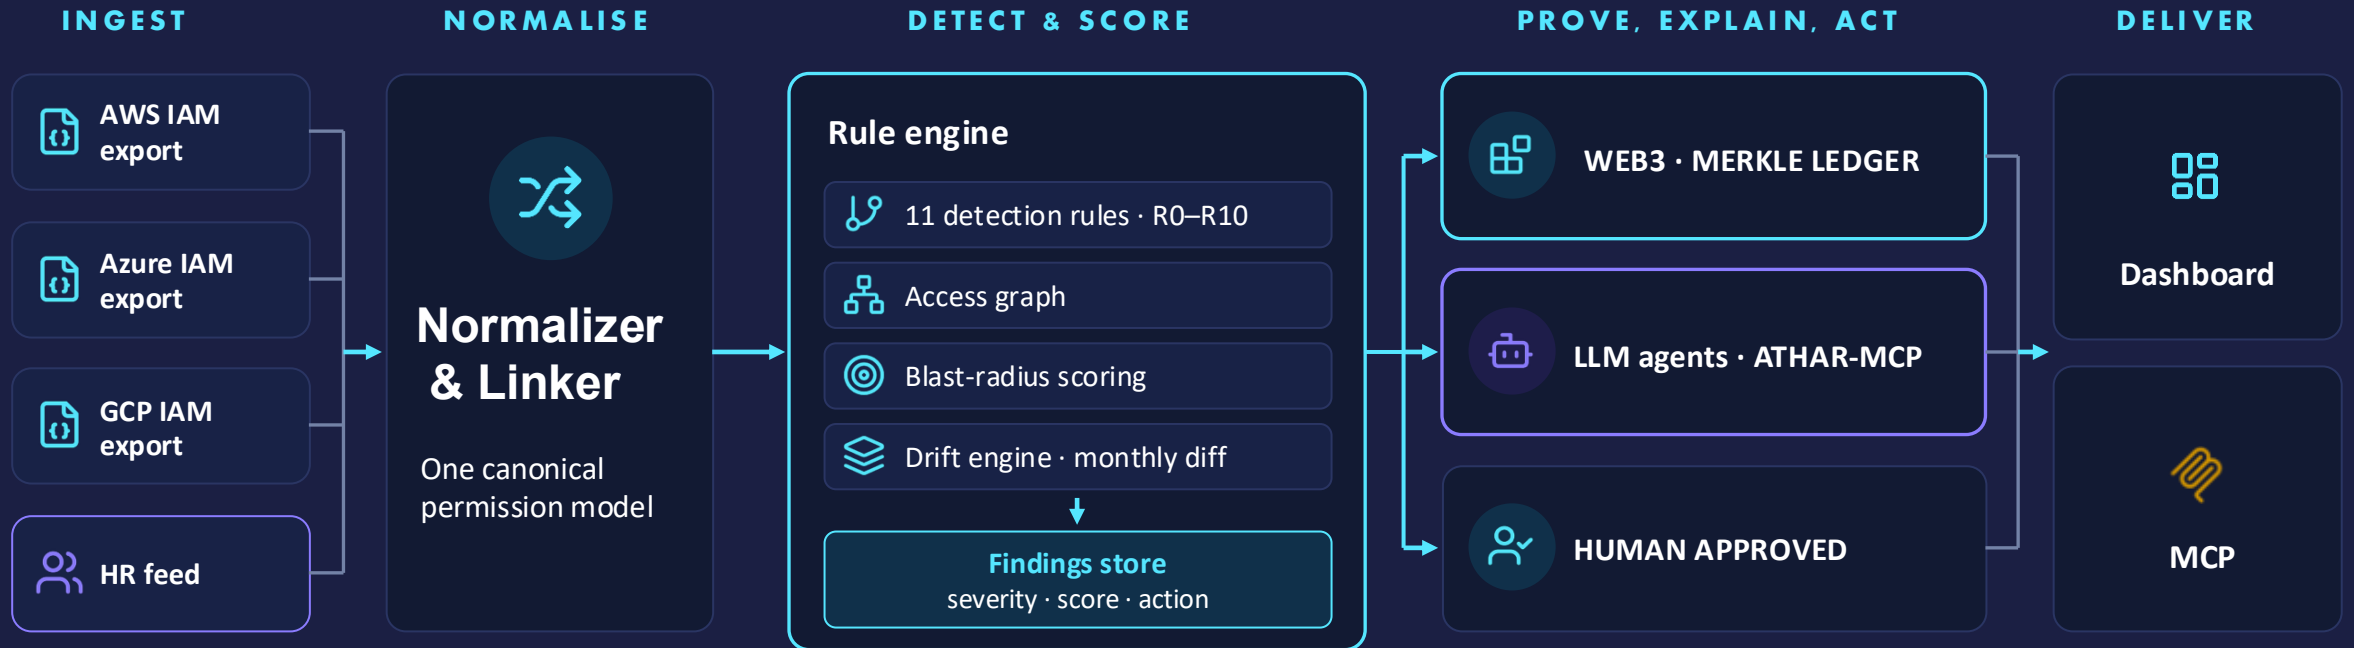

Cloud security & IT governance teams

Compliance officers

Auditors

CISOs

PROPOSED SOLUTIONS

The rules decide.
The LLM only explains.

Every scan and decision
is anchored.

SOLUTION VALIDATION

HOW WE TESTED

-  1,859 · 167 · 21 automated tests
-  Contract fuzzing + proof check
-  61 robustness fixtures
-  11 adversarial decoys
-  2 rounds of adversarial review
-  2 m 27 s, clean machine → dashboard

WE ATTACKED IT

Edited a stored severity

LLM proposed unseen grants

Fed broken input files

Ran make demo twice

WHAT HAPPENED

Caught. Verification fails; badge turns red

Rejected. 4 named violations; root byte-identical

Handled. Structured error, no stack trace

Idempotent. 12× “already anchored”, no duplicates

LIMITATIONS

Ledger ≠ correctness

Visibility Boundary

Single-host writer key

Simulated apply

RESULTS & CONCLUSION

507

identities

47 → 99

findings, month 1 → 12

500 / 27

granted / revoked

OBJECTIVE	WHAT WE MEASURED
01 Unified cross-cloud view	Unified mapping of all human and service accounts across AWS, Azure, and GCP.
02 Actionable Intelligence	Findings strictly prioritized by severity (Critical to Low) based on the measured blast radius.
03 Tamper-evident audit trail	Scans and decisions Merkle-anchored; a tampered finding is caught
04 Robust and repeatable	Broken inputs handled; second run: 12x already anchored

WHAT A GOVERNANCE TEAM GETS

✓

One view of who can do what, since when

✓

Root causes, e.g. broken offboarding

✓

Drafted fixes, human-approved with SoD

✓

Evidence auditors can re-verify themselves

NEXT
